

Project Executable Files

Date	15 March 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction Using Machine Learning
Maximum Marks	3 Marks

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (yes / No / NA)
1	Complete source code (all files and folders)	yes
2	README / Setup Guide (instructions to run the project)	yes
3	requirements.txt / package.json / dependency file	yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	yes
10	Demo video or walkthrough (if required)	yes

Step 2: File / Folder Structure

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://credit-card-approval-prediction-3cw7.onrender.com/
Login Credentials (Demo)	Not Applicable (No login required)
Platform / Hosting Provider	Render
Repository Link	https://github.com/Arsheenkhanam/Credit-Card-Approval-Prediction
Demo Video Link	https://drive.google.com/file/d/1gB9C8pFyLK38yDPaXDarrsCDMdIL1TB6/view

Step 4: Run Instructions

step-by-step instructions for the evaluator to run your project locally:

Pre-requisites

Before running the project, ensure the following software is installed:

- **Operating System:** Windows 10/11, Linux, or macOS
- **Python:** Version **3.10 or above**
- **Git:** Latest version (optional, for cloning the repository)
- **Web Browser:** Google Chrome, Microsoft Edge, or Mozilla Firefox
- **Required Python Libraries:** Listed in requirements.txt
- **Internet Connection:** Required only for cloning the repository or downloading dependencies.

step 1: Clone the Repository

Open Command Prompt or Terminal and run:

```
git clone https://github.com/Arsheenkhanam/Credit-Card-Approval-Prediction.git
```

Or download the ZIP file from GitHub and extract it.

Step 2: Navigate to the Project Folder

```
cd Credit-Card-Approval-Prediction
```

Step 3: Install Required Dependencies

Install all required Python libraries using:

```
pip install -r requirements.txt
```

Step 4: Verify Project Files

Ensure the following files and folders are available in the project directory:

- app.py
- requirements.txt
- Trained ML model (.pkl)
- Dataset (.csv)
- templates/
- static/

Step 5: Run the Application

Start the Flask application using:

```
python app.py
```

The terminal should display:

* Running on <http://127.0.0.1:5000>

Step 6: Access the Application

Open a web browser and visit:

<http://127.0.0.1:5000>

Enter the applicant details in the prediction form and click **Predict** to receive the credit card approval prediction along with the reasons for approval or rejection.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	The prediction accuracy depends on the quality and diversity of the training dataset.	Currently uses a validated dataset. Future versions will be trained with larger and more diverse real-world datasets to improve accuracy.
2	The application currently operates in a local development environment and is not optimized for handling a large number of concurrent users.	Suitable for demonstration and academic purposes. Future deployment on a cloud platform with scalable infrastructure is planned.
3	The system relies on manual entry of applicant details and is not integrated with real-time banking databases or external APIs.	Users manually provide applicant information. Future versions will integrate secure banking APIs to automate data retrieval and processing.
